                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This protein comprises human death domain containing receptor DR3, a novel member of the tumour necrosis factor receptor family. Its amino acid sequence was deduced from a CDNA clone (see AAR9427) isolated from a HUVEC CDNA library. Related death domain containing receptor DR3-VI (see AAW31516) has also been identified. Recombinant full-length or mature DR3, or the extracellular, transmembrane, intracellular or death domain of DR3 can be expressed in transformed host cells. These polypeptides can be used to treat diseases and disorders associated with the inhibition of apoptosis, or to screen for modulator compounds. Antagonists, such as antibodies raised against DR3-VI, can be used to treat diseases and disorders associated with increased apoptosis and for treatting inflammatory diseases and disorders

indices apoptotic activity in mammalian cells purposes. Its amino acid sequence was deduced from a human foetal heart cDNA clone (see AAF91180).

Crancher novel apoptosis polypeptide, Apo-211 (see AAFA5709). Also claimed another novel apoptosis polypeptide, Apo-211 (see AAFA5709). Also claimed are: polypeptides comprising the extracellular or death domain of Apo-3; chimeric molecules comprising Apo-3 fused to a heterologous amino acid sequence; antibodies that bind to Apo-3 or its extracellular domain; cells; a non-human transgenic animal containing cells that express culls; a non-human transgenic animal containing cells having an altered Apo-3 gene. Apo-3 can be used to induce apoptosis or NF-kB induction or JNK mediated gene expression for therapeutic purposes. Apo-3-1gG fusion proteins can be used to inhibit apoptosis or NF-kB induction or JNK activation for therapeutic purposes, and can be used as immunogens for anti-Apo-3- antibody production. Apo-3 or Apo-2011 can also be used as assay standards. The animals can be used in drug
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 CTEPCGNSTCLVCPQDTFLAWENHHNSECARCQACDEQASQVALENCSAVADTRCGCKPG 120

The invention provides nucleotide sequences encoding death domain containing receptor polypeptides DR3-V1 and DR3. The DR3-V1 cDNA clone is contained in ATCC deposition No. 97456 and the DR3 cDNA clone is contained in ATCC deposition No. 97757. Recombinant vectors comprising the nucleic acid sequences and optionally the leader sequences are used for the recombinant production of the proteins. The present sequence represents the amino acid sequence of a death domain containing receptor

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence is the human apoptosis inducing receptor (AIR) of the invention. AIR is a Type I transmembrane protein, soluble forms of which can be used to regulate cell death in a therapeutic setting. Soluble AIR can be used to ritro to block apoptosis or AIR-expressing cells, or to screen agonists or antagonists of AIR activity. The cytoplasmic domain of AIR can be used to develop assays for inhibitors of AIR-induced cell death, which is useful to regulate cell death in a therapeutic setting as well as in vitro. Agonists of AIR activity can be used to kill tumour cells that express AIR, or I cells expressing AIR in autoimmune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120

The invention relates to TNFR related polypeptides TR1, TR3 and TR5 (see AAV577-44) and their ligand TL3 (see AAY65745). TR1, TR3, TR5 and TL3 are used in claimed methods of identifying agonists and antagonists, i.e. compounds that bind

to the receptors or ligand, and which activate (agonist) or inhibit activation of (antagonists) TR1, TR3, TR5 or TL3. A screening kit for identifying agonists, antagonists, ligands, receptors, substrates, enzymes etc. for TR1, TR3, TR5 or TL3 polypeptides is provided. The agonists and antagonists are useful for treatment of chronic and acute inflammation, arthritis, septicaemia, autoimmune disease e.g. inflammatory bowel disease, psociaais, transplant rejection, graft versus host disease, infection, stroke, ischaemia, acute respiratory disease hymphoproliferative disorders), atherosclerosis, brain injury, AIDS, bone diseases, cancer (e.g. lymphoproliferative disorders), atherosclerosis, Alzheimer's disease, etc., caused by imbalance of TR1, TR3, TR5 or TL3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

This invention relates to a method of diagnosing chronic rheumatoid arthritis by digesting human genomic DNA with ECORI and hybridising it with a probe for the DNA encoding the present protein which is a rheumatoid arthritis associated transmembrane protein. The method is used for the diagnosis of chronic rheumatoid arthritis, and for developing new
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                121 WFVECQVSQCVSSSPFYCQPCLDCGALHRHTRLLCSRRDTDCGTCLPGFYEHGDGCVSCP 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           원
                                                                                                                                                                                                                                                                                    The present invention provides the protein and coding sequences for two death domain containing receptors, designated DR3 and DR3-V1. These receptors are involved in apoptoals, and the sequences given can be used in the treatment of cancers, inflections, cardiovascular disorders such as arrhythmias, ischaemia, aneurysms, arterial occlusive diseases, embolisms and congenital heart defects, neurodegenerative diseases including Alzheimer's and Parkinson's diseases, autoimmune disease such as multiple sclerosis, arthritis, diabetes, Graves disease, asthma and psoriasis, and to promote angiogenesis and wound healing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TSTLGSCPERCAAVCGWRQMFWVQVLLAGLVVPLLLGATLTYTYRHCWPHKPLVTADEAG 240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  polypeptides and the polynucleotide sequences encoding them. The PRO polypeptides, agonists, antagonists or anti-PRO antibodies are useful for treating benign or malignant tumours (e.g. renal, kidney, bladder, breast, etc), leukaemias and lymphoid malignancies, other disorders such as neuronal, glial, astrocytal, hypothalamic, glandular, macrophagal, stromal and blastocoelic disorders, inflammatory, immune and angiogenic disorders. The polymucleotide sequences are also useful in gene therapy.
                                                                                                                                                                                                                                                                                                               duman; PRO; benign tumour; malignant tumour; lymphoid malignancy;
leukaemia; neuronal disorder; stromal disorder; blastocoelic disorder;
inflammatory disorder; immune disorder; angiogenic disorder; cytostatic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Thirty five nucleic acids encoding PRO polypeptides, useful for treating benign or malignant tumors, leukemias and lymphoid malignancies, inflammatory, angiogenic and immunologic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAU86128-AAU86162 represent the human PRO polypeptides of the invention

This invention relates to an isolated monoclonal antibody comprising an antigen binding site which binds to an Apo-2 ligand inhibitor (Apo-2LI) polypeptide and an antibody that binds the Apo3 protein. The antibodies of the invention may have cytostatic activity and may act as activators of the invention may have cytostatic activity and may act as activators of the invention may have cytostatic activity and may act as activators or excessive conspotants or the autoimmune/inflammatory effects of Apo-3 resulting from nuclear factor (NF)-kappaB activation or C-Jun-amino-terminal kinase (JNK) activation. The anti-Apo-2 ligand inhibitor is useful in cancer cells and may be used to block excessive apoptosis (for example in neurodegenerative disease), or to block potential autoimmune/FappaB activation or C-Jun-amino-terminal kinase (JNK) activation. The antibody may also be used in diagnostic assays for Apo-2LI or Apo-3, e.g. detecting Apo-2LI or Apo-3 are payression in specific cells, tissues or serum, or for affinity purification of Apo-2LI or Apo-3 from recombinant cells culture or natural sources. The present sequence represents the human Apo3 protein which was used to generate the antibody of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120

                                                                                                                                                                                                                                                                                                                                                                                                            Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an new isolated biologically active Apo-2LI or Apo-3 having at least 80 % sequence identity with native sequence Apo-2LI cor Apo-3 appearing as ABU08251 and ABU08251. Also included are a chimaeric molecule comprising the Apo-2LI fused to a hererologous amino acid sequence; a dimer molecule comprising a first Apo-2LI and a second Apo-2LI, an antibody that binds to Apo-2LI or Apo-2LI and a second correctly an antibody that binds to Apo-2LI or Apo-3LI and a second or Apo-3L, a vector comprising the nucleic acid, a host cell comprising the vector, a method of producing Apo-2LI and a non-human (transgenic or knockout) animal that contains cells that express nucleic acid encoding Apo-3 or cells having an altered gene encoding Apo-3. Apo-2LI or Apo-3 are involved in apoptosis (programmed cell death) which is implicated in Apo-3 or cells having an altered gene encoding Apo-3. Apo-2LI or Apo-3 are involved in apoptosis (programmed cell death) which is implicated in Apo-3 are also varietience and tereal sclerosis, multiple sclerosis, retinitis pigmentosa, aplastic anaemia, cerebellar degeneration, myocardial infarction, reperfusion injury and toxin-induced liver myocardial infarction, reperfusion is located on chromosome 1936.3 Apo-2LI and Apo-3 are also useful for preparing a composition for treating cancer. The present sequence represents Apo-3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CTEPCGNSTCLVCPQDTFLAWENHHNSECARCQACDEQASQVALENCSAVADTRCGCKPG 120
                                          Human, Apo-2 ligand inhibitor, Apo-2LI, Apo-3; apoptosis; AIDS; acquired immunodeficiency syndrome; stroke; Alzheimer's disease; cancer; Parkinson's disease; amyotrophic lateral sclerosis; multiple sclerosis; retinitis pigmentosa; aplastic anaemia; cerebellar degeneration; myocardial infarction; reperfusion injury; toxin-induced liver disease; chromosome 1q36.3; programmed cell death.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9

Towells of apoptosis are associated with diseases such as acquired immunodeficiency syndrome (AIDS), Alzheimer's disease, Parkinson's disease, amyotrophic lateral sclerosis, multiple sclerosis, retinitis disease, amyotrophic lateral sclerosis, multiple sclerosis, retinitis pigmentosa, cerebellar degeneration, aplastic anaemia, myocardial infarction, stroke, reperfusion injury, and toxin-induced liver disease. The App-3 polypeptide is also useful in non-therapeutic applications such as in quantitative diagnostic assays as control against which samples containing unknown quantities of App-3 may be prepared, in generating antiques, and in competitive-type receptor binding assays. The chimeric cechniques, and in competitive-type receptor binding assays. The chimeric molecule is useful therapeutically to inhibit apoptosis or nuclear factor kappa B (MP-kappa B) induction, or as an immunogen for producing anti-App-3 antibodies. The present sequence represents the polypeptide sequence of the human App-3 protein present in the foetal heart
                                                                                                                                                                                                                                                                                                                    The invention relates to an Apo-3 polypeptide having an extracellular domain (BCD) sequence and a death domain sequence. The Apo-3 polypeptide has been found to stimulate or induce apoptotic activity in mammalian cells. Human Apo-3 exhibits similarities to the tumour necrosis factor receptor (TNFR) family of polypeptides. The invention also relates to a chimeric molecule comprising an extracellular domain sequence comprising residues 1-198 of Apo-3 fused to a heterologous amino acid sequence. The Apo-3 polypeptide is useful therapeutically to induce apoptosis in mammalian cells. Decreased levels of apoptosis has been associated with conditions such as cancer, lupus, and herpes virus infection. Increased
                                                                                                                                       Novel isolated Apo-3 polypeptide useful for inducing apoptosis in mammalian cells, for generating antibodies, in affinity purification techniques, and in competitive-type receptor binding assays.
                                                                                                                                                                                                                                                                Claim 1; Fig 8; 52pp; English.

The invention relates to an isolated Apo-3 polypeptide. The Apo-3 polypeptides are useful for stimulating or inducing apoptotic activity in mammaalian cells e.g. cancer cells, or for in vivo or ex vivo gene therapy techniques. The Apo-3 chimeric molecules are useful for inhibiting apoptosis, or as immunogens used in generating antibodies. The antibodies may be used to block excessive apoptosis, for instance in neurodegenerative disease, or to block potential autoimmune/inflammatory effects of Apo-3 resulting from NF-kappas activation. The nucleic acid sequences are useful as diagnostics for tissue-specific kryping, for preparing Apo-3 polypeptides, or for generating transgenic or knockout animals. The transgenic or knockout animals are useful in developing and screening of therapeutically useful reagents. The present sequence represents the amino acid sequence of human Apo-3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated Apo-3 polypeptides, useful for stimulating or inducing apoptotic activity in mammalian cells, e.g. cancer cells, or for in vivo

The present invention describes the use of an agonist or antagonist of GENCEPTIN activity for preventing or treating obesity. Also described is a method of screening for GENCEPTIN activity. Also described is a method of screening for GENCEPTIN set since fatty acid oxidation, and useful partitioning, lipid metabolism, insulin-like activity, free fatty acid oxidation, and weight reduction. GENCEPTIN has anorectic, antilipaemic, ophthalmological, neuroprotective and nephrotropic activities. GENCEPTIN can be used for treating or preventing obesity-related disease or disorders, e.g. obesity, insulin resistance, atherosalerosis, atheromatous disease, heart disease (e.g. cardiac insufficiency, thigh blood pressure), hypertension, stroke, syndrome X, diabetes mellitus (type I and II), hyperlipidaemia and hyperuricaemia, also diabetic compilications, e.g. microangiopathic lesions, ocular lesions, retinopathy, neuropathy and renal lesions. The present sequence represents human GENCEPTIN, which is given in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an isolated biologically active Apo-2LI or Apo-3 which has at least 80% sequence identity with native sequence Apo-2LI having 1-181 amino acids or Apo-3 having 1-417 amino acids, respectively. Apo-3 can be employed therapeutically to induce apoptosis or NF-kappaB or JNK mediated gene expression in mammalian cells. The Apo-3 chimeric molecules can be employed therapeutically to inhibit apoptosis; necrosis factor (NF)-kappaB induction, c-Jun N-terminal kinase (JNK) activation. Apo-2LI can be employed therapeutically to inhibit mammalian cell
                                                                                                                                                                                                                                                                                                                                                                  'note= "Specifically claimed in claim 4. Residues 1-181
                                                                                                                                                          human; Apo-2 ligand inhibitor; Apo-2LI; apoptosis; NF-kappaB; JNK; c-Jun N-terminal kinase; necrosis factor kappa B; chimeric molecule; tissue-specific typing; Apo-3; transgenic; affinity purification; competitive-type receptor binding assay.
       New isolated biologically active Apo-2LI or Apo-3 used to induce apoptosis in mammalian cells.
                                                                                                                                                                                                                                                                                                                                             16. 163

apoptosis in vivo or ex vivo. Nucleic acid sequences encoding the Apo-3 or Apo-2LI may be used as a diagnostic for tissue-specific typing. The isolated Apo-2LI may be used in quantitative diagnostic assays as a control against which samples containing unknown quantities of Apo-3LI may be prepared. Apo-3 preparations are also useful in craffinity purification techniques, and in competitive-type receptor. If it is affinity purification techniques, and in competitive-type receptor. It is affinity purification techniques, and in competitive-type receptor. It is affinity purification techniques, and in competitive-type receptor. It is affinity purification techniques, and in competitive-type receptor. It is affinity purification techniques, and in competitive-type receptor. It is affinity purification are apolitically acid forms of the Apo-3, e.g. Apo-3-1gG chimeric. The Apo-3 exists antibodies. Nucleic acids which encode Apo-3 or its modified forms can also be used to generate either transgenic animals or knock out animals. e.g. mouse or cat, which, in turn, are useful in the development and screening of therapeutically useful in reagents. The Apo-3 polypeptide stimulates or induces apoptotic activity in mammalian cells. The present sequence represents the human apoptotic protein, Apo-3 residues 1-181 of Apo3 creptored or soluble form of Apo3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                TSTLGSCPERCAAVCGWRQMFWVQVLLAGLVVPLLLGATLTYTYRHCWPHKPLVTADEAG 240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     S18946

Ultra high-sulfur keratin 1 - human

Ultra high-sulfur keratin 1 - human

U.Species: Homo sapiens (man)

C.Species: Homo sapiens (man)

C.Date: 22-Oct-1999 #sequence_revision 22-Oct-1999 #text_change 09-Jul-2004

C.Accession: S18946; B3666

C.Accession: S18946; Banecke, D.

Submitted to the EMBL Data Library, December 1991

A.Description: Nucleotide sequence of a Human high-sulphur keratin cDNA.

A.Reference number: S18946

A.Moccession: S18946

GPI-anchor amidated cysteine (Potential).
TNPR-Cys 1.

TNFR-Cys 2.
Submitted (JUL-2001) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: Receptor for the cytotoxic ligand TRAIL. Lacks a cytoplasmic death domain and hence is not capable of inducing apoptosis. May protect cells against TRAIL mediated apoptosis through ligand competition. Cannot induce the NF-kappa-B pathway.
-!- SUBCELLUIAR LOCATION: Attached to the membrane by a GPI-anchor.
-!- TISSUE SPECIFICITY: Ubiquitous.
-!- SIMILARITY: Contains 3 TNPR-Cys repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9; Gaps
